GitHub Actions demonstrator for LaTex

Michael Schlottke-Lakemper

December 8, 2021

1 Motivation

This repository serves as a demonstrator for how to set up GitHub Actions to automatically build a LaTex PDF on pushing to the repository's main branch. The built PDF will be pushed to a separate branch to allow a persistent (= convenient) link from the repository README file.

2 Usage

Have a look at the GitHub Actions workflow file in `.github/workflows/ci.yml`. The link to the produced LaTex file can be found in the `README.md`.
